<b>Competencies to be formed</b>	Studying the academic discipline "Human life safety" ensures the formation of universal competencies: to apply basic methods of protecting the population from negative factors of anthropogenic, man-made, natural origin, principles of rational nature management and energy conservation, ensure health and safe working conditions.
<b>Brief content of the academic discipline:</b>	
<p>The integrated academic discipline "Human life safety" includes the disciplines "Protection of the population and facilities in emergency situations", "Radiation safety", "Basics of ecology", "Fundamentals of energy conservation", "Labour protection", which are mandatory for study at the first stage of higher education in the Republic of Belarus. This discipline aims to form a culture of life safety of future specialists based on a system of social norms, values and attitudes that ensure the preservation of their life, health and performance in conditions of constant interaction with the environment. While studying this discipline, future specialists should receive modern theoretical knowledge about various types of emergency situations, modern weapons and ways to protect the population and objects from them. They should learn how to solve tasks for actions in various emergencies, familiarize themselves with the basics of ecology, energy conservation and labor protection and the legislation of the Republic of Belarus in these areas of life and be able to apply the knowledge and skills gained in their future professional activities.</p>
