Competences	Mastering the academic discipline "Visualization of the results of sociological research" should ensure the development of universal competence: to solve standard problems of professional activity on the basis of information and communications technologies and special competence; to create graphic presentations of the results of sociological research using modern data visualization programs (MS PowerPoint, Tableau).

Summary of the academic discipline:

The aim of the discipline is to obtain knowledge about the presentation of the results of sociological research in different forms for the visual perception of the customer. The most common forms of presentation of quantitative characteristics are tables, diagrams and graphs of different sorts and schemes. Visualization allows to expand the already available data obtained through interviews or other traditional methods. The forms of presenting the results of sociological research; publications based on the results of the research; technologies of creating information graphics; strategy and concept of developing a presentation are studied.
