To use knowledge about the structure and principles of the functioning of the nervous system to analyze the human psyche in the norm and in various diseases. To analyze the nature of the influence of physical, biological and social factors of the environment, personality and behaviour on human health.

Brief content of the academic discipline:

The academic discipline "Fundamentals of neuropathology" has a professional and general scientific orientation. The professional orientation aims to familiarize students with the subject and methods of neuropathology, with information about the structure and functions of the nervous system, which is the basis for mental processes. The general scientific orientation aims to familiarize the specialist with the current state of scientific research in neuropathology, introduces the methods and techniques for diagnosing nervous diseases. The acquired special knowledge will help to equip the future psychologist with specific tools that make it possible to identify pathological deviations from the functioning of the nervous system.
