<b>Competencies to be formed</b>	Mastering the discipline «Human life safety» should ensure the formation of universal competencies: to apply the basic methods of protecting the population from negative anthropogenic-, technogenic- and natural-originated factors, principles of rational use of natural resources and energy conservation; to ensure health and safe working conditions.
<b>Brief content of the academic discipline:</b>	
<p>The integrated academic discipline «Human life safety» includes the disciplines «Protection of the population and facilities from emergency situations», «Radiation safety», «Fundamentals of Ecology», «Fundamentals of Energy conservation», «Labour protection», which are mandatory for study at the first stage of higher education in the Republic of Belarus. This discipline aims to form future specialists' life safety culture based on a system of social standards, values and attitudes that ensure the preservation of their lives, health and work efficiency during constant interaction with the environment. After studying this discipline, future specialists should receive modern theoretical knowledge about various types of emergencies, modern weapons and ways of protecting the population and facilities from them; learn to solve action tasks in various emergency situations; get acquainted with the fundamentals of ecology, energy conservation and labour protection and the legislation of the Republic of Belarus in these areas of life and be able to apply the knowledge and skills gained in their future professional activities.</p>
